No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1982 articles are the same as those shown for current articles.

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 123

NUMBER 1, JUNE 1982

The Detection of Tritium-Labeled Ligands and Their Carrier Proteins Using a Multiwire Proportional Counter
Barbara J. Scott, J. E. Bateman, and A. R. Bradwell 1

Quantitative Determination of Allantoin in Biological Fluids by Reversed-Phase High-Pressure Liquid Chromatography *W. Tiemeyer and D. Giesecke* 11

Analysis of Sperm Antigens by Sodium Dodecyl Sulfate Gel/Protein Blot Radioimmunobinding Method *Chi-yu Gregory Lee, Yuan-Shen Huang, Ping-Chuan Hu, Victor Gomel, and Alan C. Menge* 14

Nycodenz: A New Nonionic Iodinated Gradient Medium
D. Rickwood, T. Ford, and J. Graham 23

Separation and Quantitation of Purines and Their Anaerobic and Aerobic Degradation Products by High-Pressure Liquid Chromatography
Peter Dürre and Jan R. Andreesen 32

A Rapid Fluorometric Assay for Measurement of Peptidase Activity
David H. Porter, Harold E. Swaisgood, and George L. Catignani 41

The Use of High-Energy Microwave Irradiation to Inactivate Mitochondrial Enzymes
Robert K. Hampson, Miguel A. Medina, and Merle S. Olson 49

A Novel Procedure for Determining Protein Concentrations from Absorption Spectra of Enzyme Digests *Thomas A. Bewley* 55

A Multisample Device for Electroelution, Concentration, and Dialysis of Proteins from Fixed and Stained Gel Slices
George R. Green, Dominic Poccia, and Louis Herlands 66

Use of D-Glucosaminic Acid as an Internal Standard in Single-Column Accelerated Amino Acid Analysis of Physiological Fluids
Collette Stacey-Schmidt, Peter Berg, and Morey W. Haymond 74

High-Performance Liquid Chromatography of *N,O*-Acylated Sialic Acids
Ashok K. Shukla, Norbert Scholz, Ernst H. Reimerdes, and Roland Schauer 78

Dialysis of Small Samples in Agarose Gels *David Freifelder and Marc Better* 83

Protein Cleavage by Boiling in Sodium Dodecyl Sulfate Prior to Electrophoresis
Joel D. Kowit and Jean Maloney 86

5′-Mercuri-uridine Triphosphate as a Substrate for Transcription
David Wayne Miller and Sarah C. R. Elgin 94

An "All-Speed" Autocalibration Method for Sedimentation Equilibrium in Dilute Homogeneous and Multicomponent Solutions. I. Theory, a Computational Scheme, and Verification by Computer-Simulated Experiments
V. Ya. Chernyak and N. N. Magretova 101

An "All-Speed" Autocalibration Method for Sedimentation Equilibrium in Dilute Homogeneous and Multicomponent Solutions. II. Determination of Molecular Weights of Proteins
V. Ya. Chernyak, N. N. Magretova, and V. A. Drachev 110

Enzymatic Location of the Amide Group on the D-Glutamic Acid and on the *meso*-Diaminopimelic Acid Residues in Monoamidated Peptides of Bacterial Cell Wall Peptidoglycans
Micheline Guinand, Marie-Jeanne Vacheron, and Georges Michel 120

Rapid Analysis of Labeled Globin Chains without Acetone Precipitation or Dialysis by High-Pressure Liquid Chromatography and Ion-Exchange Chromatography
L. F. Congote and A. G. Kendall 124
Simplified Techniques for Elution of Proteins from Polyacrylamide Gel, Staining, Destaining, and Isoelectric Focusing
A. M. Bodhe, V. V. Deshpande, B. C. Lakshmikantham, and H. G. Vartak 133
Identification of Concanavalin A-Binding Proteins after Sodium Dodecyl Sulfate-Gel Electrophoresis and Protein Blotting *Richard Hawkes* 143
A Direct Method for the Visualization of Glutathione *S*-Transferase Activity in Polyacrylamide Gels *Alan G. Clark* 147
A Procedure for Rapid Extraction and High-Pressure Liquid Chromatographic Separation of the Nucleotides and Other Small Molecules from Bacterial Cells
Shelley M. Payne and Bruce N. Ames 151
Isolation and Quantitation of DNA-Bound Benzo(a)pyrene Metabolites: Comparison of Hydroxyapatite and Precipitation Procedures
Peter I. Adriaenssens, Carol J. Bixler, and Marshall W. Anderson 162
Improved α-Glycerophosphate Dehydrogenase Assay System Suitable for Continuous Recording *Brian C. W. Hummel and Paul G. Walfish* 170
A Spectrophotometric Determination of Protein Immobilized to Affinity Gels
Hans Schurz and Harold Rüdiger 174
Purification of Haptoglobin from Rat Serum *Shigeo Akaiwa* 178
A Nonincinerative Rate-Sensing Method for the Determination of Iodine in Iodoproteins *Giuseppe Palumbo, Mario F. Tecce, and Giuseppe Ambrosio* 183
Separation of Angiotensins by High-Performance Liquid Chromatography on a Weak Anion-Exchange Bonded Phase
Miral Dizdaroglu, Henry C. Krutzsch, and Michael G. Simic 190
A Single-Step Method to Concentrate and Desalt Proteins Which is Also Useful for Determination of Detergent Binding to Membrane Proteins
Emilio Rivas, Nicole Pasdeloup, and Marc Le Maire 194
A Simple Spectrophotometric Method for Determining Proton Release from Yeast Cells *Carlos Pascual and Arnošt Kotyk* 201
Use of Permeabilized Yeast Cells for the Determination of Ethanol and Alcohol Dehydrogenase Assay *Carlos Pascual, Roberto Pascual, and Arnošt Kotyk* 205
A Practically Sensitive Radioimmunoassay for Cyclic CMP by 2′-*O*-Acetylation
Tomokazu Sato, Akira Kuninaka, and Hiroshi Yoshino 208

NUMBER 2, JULY 1, 1982

Anomalous Tritium Loss in the Measurement of Tissue Hydroxy-[5-^{3}H]Proline Specific Activity following Chloramine-T Oxidation
Geoffrey J. Laurent, Robin J. McAnulty, and Michael H. Oliver 223
Protein Transfer from Isoelectric Focusing Gels: The Native Blot
Michael P. Reinhart and Daniel Malamud 229
Direct Cell Culture Assay of Thin-Layer-Chromatographed Material without Prior Substance Elution *Olof Söder* 236
Characterization and Determination of Titratable Groups of Proteins by Linearization of Titration Curves. II. Application to Lysozyme
O. E. S. Godinho, L. M. Aleixo, and J. P. Hora Alves 244
A Resin-Based Method for the Preparation of Molecular Nitrogen for ^{15}N Analysis from Urinary and Plasma Components
W. W. C. Read, R. A. Harrison, and D. Halliday 249
An Automated Continuous-Flow Dynamic Dialysis Technique for Investigating Protein-Ligand Binding
Neil Arthur Sparrow, Allan Edward Russell, and Leslie Glasser 255
A Coupled Optical Enzyme Assay for Phosphopentomutase
Maria Grazia Tozzi, Roberta Catalani, Pier Luigi Ipata, and Umberto Mura 265
Measurement of Ketone Bodies in Subcellular Fractions Using a Spectrophotometric Iron-Chelate Assay *R. I. Kientsch-Engel, E. A. Siess, and O. H. Wieland* 270
Direct Activity Stains for Glycosidase and Glucosyltransferase after Isoelectric Focusing in Horizontal Polyacrylamide Gel Layers
Hidehiko Mukasa, Atsunari Shimamura, and Hideaki Tsumori 276
Determination of Proton Dissociation Constants by Ion-Exchange High-Performance Liquid Chromatography *R. J. W. De Wit* 285
Rapid Concentration of Urinary Peptides and Proteins
Ulf-Håkan Stenman, Kristina Pesonen, and Marja-Liisa Huhtala 291
Determination of Carbonyl Oxygen Exchange Rates in α-Ketoacids by Gas Chromatography-Mass Spectrometry
Tenkasi S. Viswanathan, Charles E. Hignite, and Harvey F. Fisher 295
Analysis of Sulfate in Complex Carbohydrates
Loui J. Silvestri, Robert E. Hurst, Leigh Simpson, and Juanita M. Settine 303
Purification of Human Kidney Angiotensin I Converting Enzyme Using Reverse-Immunoadsorption Chromatography
John A. Weare, John T. Gafford, H. S. Lu, and Ervin G. Erdös 310
A Steady-State Kinetics Study of Myrosinase with Direct Ultraviolet Spectrophotometric Assay *S. Palmieri, O. Leoni, and R. Iori* 320
[^{59}Fe]Ferrous Bathophenanthroline Sulfonate: A Radioactive Stain for Labeling Proteins *in Situ* in Polyacrylamide Gels
Edward J. Zapolski, Douglas M. Gersten, and Robert S. Ledley 325

The Specific Detection of Collagenous Proteins after Electrophoresis Using Enzyme-Conjugated Collagen-Binding Fibronectin Fragments
Marsha L. Bell and Eva Engvall 329
A Rapid and Sensitive Method for the Analysis of Carbohydrate Components in Glycoproteins Using Gas-Liquid Chromatography *Martin F. Chaplin* 336
Reverse-Phase High-Performance Liquid Chromatography of *Escherichia coli* Ribosomal Small Subunit Proteins
Anthony R. Kerlavage, Lawrence Kahan, and Barry S. Cooperman 342
Amino Acid Determination in Pure Proteins, Foods, and Feeds Using Two Different Acid Hydrolysis Methods *Bernardo Lucas and Angela Sotelo* 349
Fluorometric Analysis of Amino Sugars and Derivatized Neutral Sugars
Fulvio Perini and Barry P. Peters 357
Isolation of Proliferative Epithelial Cells from the Rat Cecum and Proximal Colon
Thomas Albert Brasitus 364
Purification of Heart Hexokinase by Dye-Ligand Chromatography
Edward E. Farmer and John S. Easterby 373
Analysis of the Free Nucleotide Pools of Mammalian Tissues by High-Pressure Liquid Chromatography
Eric G. Brown, Russell P. Newton, and Nicholas M. Shaw 378
Ascorbic Acid Analysis in Biological Fluids
Richard C. Rose and David L. Nahrwold 389
Analysis of Peptic Fragmentation of Human Immunoglobulin G Using High-Performance Liquid Chromatography
Tsugikazu Tomono, Tohru Suzuki, and Eiichi Tokunaga 394
Cord Blood Screening for Hemoglobin Disorders by High-Performance Liquid Chromatography *Adoor Amanullah, Samir Hanash, Kirsten Bunnell, John Strahler, Donald L. Rucknagel, and Steven J. Ferruci* 402
A Simple and Rapid Purification of Commercial Trypsin and Chymotrypsin by Reverse-Phase High-Performance Liquid Chromatography
Koiti Titani, Tatsuru Sasagawa, Katheryn Resing, and Kenneth A. Walsh 408
Adaptation of Reverse-Phase High-Performance Liquid Chromatography for the Isolation and Sequence Analysis of Peptides from Plasma Amyloid P-Component
Jacqueline K. Anderson and John E. Mole 413
Characterization of Human Alcohol Dehydrogenase Isoenzymes by High-Performance Liquid Chromatographic Peptide Mapping
Daniel J. Strydom and Bert L. Vallee 422
Purification of Glycopeptides of Human Ceruloplasmin and Immunoglobulin D by High-Pressure Liquid Chromatography
Daniel Tetaert, Nobuhiro Takahashi, and Frank W. Putnam 430
AUTHOR INDEX FOR VOLUME 123 438

The Subject Index for Volume 123 will appear in the December 1982 issue as part of a cumulative index for the year 1982.

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell and tissue culture techniques that are of general application.

— Sequencing and synthesis of nucleic acids; chemical mutagenesis.

— Purification methods for enzymes and other proteins when a high level of purity has been achieved.

— Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that have a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in triplicate to ***Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.** In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may

---

[1] An extended Information for Authors will appear in Volume 124, Number 1, July 15, 1982. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
